

5/30/17

Highrise Consulting, Inc. is seeking **Java Developers (Mid-level)** with at least 3 years of experience to work onsite at an NIH (National Institutes of Health) facility in Bethesda, MD (Rockledge Drive). There is the potential for some remote work.

Job Responsibilities:

1. Develop, and maintain web-based grant management application systems for the National Institutes of Health – eRA Program (era.nih.gov)
2. Full stack development (HTML, JavaScript, Java, SQL). Maintain existing code through bug fixes and enhancements. Provide production support. Unit test Java code and manipulate data for analysis of system requirements.

Contribute to success of the project as a member of a Scrum team.

Required Skill Set / Experience:

1. Bachelor's degree in a related technical field and 1+ related technical experience
2. Solid understanding of technologies that comprise a full stack J2EE application. Hands-on experience with back end technologies (Java/J2EE, Spring, SQL) and/or front end technologies (HTML, JavaScript, JQuery, JSP).
3. Good verbal and written communication skills, teamwork, drive, desire to learn.
4. Familiarity with software development lifecycles (SDLC) and ability to apply best practices using industry standards throughout all software developed.
5. Experience working in Agile environments and understanding of Agile methodology.

Preferred Skills:

1. Experience with full stack development of HTML/JavaScript/Spring/Tomcat applications.
2. Working knowledge of front-end technologies such as VueJS and JQuery.
3. Experience with grants or NIH environments.

Clearance Level Must Be Able to Obtain: Public Trust

Potential for Teleworking: No

Travel: None

Shift: Day Job
