
Highrise Consulting, Inc. (www.highriseconsulting.com) is seeking candidates for the **Mid-Level Tester** position to work on client site in Rockville MD. To apply, send resume to careers@highriseconsulting.com - please include 'Mid-Level Tester' in the subject of your email.

Referral Bonus: \$2000 (candidate must be continuously employed with Highrise for 3 months).

MAJOR PURPOSE OF THIS JOB: Highrise is seeking Mid-Level Software Testers to support our onsite client in the Rockville, MD area. The client is a very large enterprise level IT business system, comprised of a multitude of modules and sub-systems. This position requires a software (SW) test professional with at least 5 – 6 years of SW Quality Control (QC) and testing experience and working with software development teams in an agile environment (Scrum) to ensure code and product development meet criteria and product standards. The selected candidate will have prior hands-on technical experience in a federal environment, experience working with a multi-disciplinary team (development, test, operations), and with automated testing.

Key Responsibilities:

- The SW tester will be required to perform software test planning and execution activities as needed, including: Integration Test, Functional Test, Component Test, Regression Test, System Test, and Security Test. He/she will track and report testing results utilizing best practices and Atlassian JIRA, Rational, and/or HP testing tools.
- Design and execute automated test cases to support functional testing at the UI layer and regression testing.
- Collaborate with Agile Team members, both Federal and Contract staff, from Product Owner to Analysts and Developers, throughout the Sprint duration.
- Demonstrate Creativity with testing ideas and show flexibility to align with team objectives at all times.

Basic Qualifications:

- Bachelor's degree or higher in an IT-related field
- A minimum of 5 years' software testing experience with complex IT-related projects
- 5 years' experience writing and working with SQL queries
- 2 years' experience with automated testing / test automation
- Previous experience working in an Agile/Scrum team
- Prior experience being based at a Client site on a day-to-day basis
- Clear, confident communications

Preferred Skills/Experience:

- Prior experience working on a government contract
- Test Automation tools such as Selenium, Cucumber, Serenity
- Performance testing experience
- Knowledge of security testing requirements
- Knowledge of Section 508 testing requirements
- Basic Java

Professional Skills:

- Must possess excellent interpersonal, verbal, presentation, and written communication skills
- Must be able to work successfully with a variety of Stakeholders
- Must be a self-starter, and able to work independently with minimal supervision
- Must be a Team player and comfortable working in a fast-paced, Client-oriented environment
- Must be able to effectively multi-task
